## 11TH ANNUAL BULL SALE

**Peter Ulrich**  
Cell: 403-625-1036

**Hans & Annette  
Ulrich**  
PH: 403-625-2237

Another year has come & gone and it's hard to believe it's time for yet another Annual Bull Sale - the 11th! Each year brings new challenges, whether it's the weather or operational expenses of ranching in southern Alberta.

Calving was exceptionally good last year, thanks to a very mild spring with very little moisture. Unfortunately, the dryness continued into the summer. The rain clouds seemed to consistently skirt our ranch and a few neighbors so it was a tough year for grass. When a little rain did come, so did the hail! As a surprise blessing, the hail shelled many of the kernels before we silaged the barley, so some late rain germinated the seeds and produced some great fall grazing for the cows! This also meant rounding up a fencing crew to enclose a 1/2 section, but the hard work and camaraderie served to provide secure grazing (& friendships) for many years to come...

We were pleased to again enter some yearling bulls in the CHA's RFI Trial at Olds and Cattleland (Strathmore). Besides measuring Residual Feed Intake (RFI), it also served to provide a respite for the lack of feed at home. In fact, we ended up leaving 20 head at the feedlot after the trial on silage & hay, due to the grass shortage. When they came home, we had to run them on some 2nd cut oat pasture after baling the green feed. Regardless, we now have a really good set of bulls to offer on Feb 21st!

You'll see us refer to the new RFI EPDs on some of our sale bulls. We've been pleased that the vast majority of our bulls have tested above average! RFI identifies animals with lower maintenance

requirements. Keeping an eye on the PWG (Post Weaning Gain) ensures we can select for efficient cattle along with the ability to gain - enabling all cattlemen to reduce feed costs.

Ulrich calves are raised on milk & grass - no creep feed here. Now over the winter, these 48 comin' 2-yr-olds, and long yearlings have been getting hay, barley silage and Landmark Feed's "Bull's Eye" backgrounding pellets, designed for growing animals. We have chosen to follow a non-medicated program, to grow out, not push these youngsters - preparing them for their real work in the spring.

We are again 5-Star status breeders at the CHA this year, by faithfully reporting performance data. Unfortunately, the number crunchers aren't very gracious to the old predictable workin' bulls that we like to cross with the newer genetics. Even though this gives some of the EPDs a beating, we believe this old/new breeding makes even better animals with more capacity, longevity, hardiness & femininity.

Please note that the EPDs here are the most current available at time of printing. The CHA is doing 6 EPD runs again in 2017, so this means that new EPDs will be released mid-Feb and could differ slightly from those published in this catalogue. Semen testing results along with scrotal measurements and new weights will be available on sale day.

This winter, we've had more snow & cold than usual, so it looks promising for next spring! Again, we thank God for the blessings of the past year and the health & strength to continue in this ranching lifestyle - how wonderful to have the original generation still involved... (Thank you, Mom & Dad!) We're also extremely grateful to you, our buyers & bidders - Thank you all for your support! We look forward to seeing you on Feb 21st!

Sincerely,

*Peter Ulrich and Hans & Annette Ulrich*

### PLEASE NOTE

Pictures of the dams of many of the sale bulls, as well as updated sale information and a downloadable version of this catalogue is available at our website:

**www.ulrichherefords.com**

### TERMS & CONDITIONS

**TERMS** - The terms of the sale are cash or cheque payable at Lethbridge, AB, on Sale Day. The right of property shall not pass until settlement is made. All settlements must be made with the clerks of the sale before any cattle will be released. For US export, USDA and individual state rules will apply.

**BIDS** - Every animal entering the sale ring will be sold to the highest bidder. A floor price will apply to each animal consigned.

**DISPUTES** - In case of disputes, bidding will be reopened between the parties involved. If no further bid is made, the buyer will be the person from whom the auctioneer accepted the last bid. The auctioneer's decision in such matters will be final.

**PURCHASER'S RISK** - Each animal becomes the risk of the purchaser as soon as sold.

**ANNOUNCEMENTS** - Errors discovered in the catalogue will be corrected by announcements from the Auction Stand at sale time and such corrections will take precedence over the printed matter in the catalogue.

**CERTIFICATE OF REGISTRY** - A certificate of registry duly transferred will be furnished to the buyer for each animal after settlement is made.

**SHIPPING** - Assistance will be given in making shipment after the sale, but no risk is assumed by Balog Auction, or the seller. **Delivery to central points in Alberta will be made at seller's convenience. Out-of-province purchases will be delivered by commercial hauler at shared cost.** Any additional expenses are the responsibility of the buyer, including duty, brokerage fees, etc.

**BREEDER'S GUARANTEE** - The consignors have done everything possible to assure you, the buyer, that every bull in this sale will be a breeder. A certified veterinarian has semen tested and physically evaluated every bull. However, should a problem arise, please inform the seller so further arrangements may be made.

**ACCIDENTS** - Although every precaution will be taken to protect the safety and comfort of buyers, neither the sales manager, auctioneer nor any owner assumes any responsibility in this matter and disclaims any liability, legal or otherwise, in the event of accident or loss of property.

**LIABILITY** - Balog Auction is acting as agent only and assumes no responsibility for representations made by the seller. Purchasers must look to the seller for fulfillment of all guarantees and representations made hereunder.

### SPECIAL POINTS to REMEMBER:

- No creep feed
- No hormones or medicated feed!
- Backgrounded, not pushed!

### KEY TO PERFORMANCE TERMS USED HEREIN:

**BW:** Actual Birth Weight in Pounds  
**205:** Weaning Weight in lbs adjusted to 205 Days  
**365:** Yearling Weight in lbs adjusted to 365 days  
**RFI:** Residual Feed Intake (feed efficiency)  
**PWG:** Post Weaning Gain (difference between WN & YR)  
**LMY:** Lean Meat Yield

Home raised in '76, 15H was a big red double-bred son of the popular 46E(136 WN indx, 125 YR indx). His progeny had volume & capacity, performance & muscling - great gains in the breed. His great females had tight, level udders, small, well-placed teats & better feet; his sons out-performed their peers. Hereford hardiness & doing ability with depth & muscling is trending again today - udders, legs & feet now compete with other breeds. 15H is still a great contributor! **Lot 107C**

53L was Grand Champion at the 2003 Medicine Hat Bull Sale. He sold to Gary Hoffman in the States, but the border closing (BSE) granted us the wonderful opportunity to use him ourselves and draw some semen before he was sold to Hollywood Herefords in Regina, SK. His offspring have lots of pigment and good thickness. His daughters provide plenty of rich milk from excellent udders, and are easy keeping. **Lot 22C**

A son of the great 114L, 105T is a handsome fellow, not just in his structure & muscling (lots of muscle and meat over the top, wide in the pins, muscle down the quarters & pants that bulge) but also holds a beautiful yet masculine head. Great length, yellow haircoat, deep ribs with extra eye-appeal and pigmentation all add up to make him really special. 105T comes from a beautiful mother of thick mossy long hair and a flat udder with teats small & set well apart & in every corner. **Lot 41C**

This is a really stout, deep, high capacity Case - a brick of a bull, with good feet, good heel, lots of performance and a great disposition! Don't overlook good balanced EPDs and above average RFI & PWG! He's a typical Pete son out of the 126W cow - a beautiful, voluminous mother with a top notch udder. This incredible dam avg'd 89 lbs BW, 106.3 WN index, 104.5 YR index for 3 sons, and 81 lbs BW, 112.3 WN index, 118 YR index for 2 daughters! Her mother (40C's granddam) is the dam of our herd sire Zoom 18Z - a great pedigree, a complete Case!

Don't let this Cat sneak away on you! He's really correct, long and quiet with tremendous maternal strength and performance. His weaning index was 116 and yearling index 109, and it's no wonder - his mom, 22R, was a super productive cow in our herd. Her 7 sons averaged 113 indx at WN, (6 sons 113.3 index at Yr) and her 2 daughters averaged 104.5 index at weaning and 106.5 at yearling. She was a beautiful elderly cow indeed with an immaculate udder to her final days.

The dam of 55C was purchased bred from Murray Stauffer's dispersal sale back in 2014. We really liked the line of cattle Murray had from his Silver Pride 38E bull. He had some really good cows from him, and this was our chance to obtain a 38E granddaughter. The result was 55C, lots of muscle, great top, and nice birthweight (86 lbs). In fact, he developed a thick top during his short time nursing, and has kept it to this day. Don't overlook this really red boy, with red hooded eyes and red testicles!

We're really happy with this fancy sale bunch of 18Z offspring - Grow - they do! (7 sons avg WN indx 108; 6 avg YR indx 104) 77C holds his head high atop deep length, with pigmented eyes, red neck, red well-shaped testicles & lots of performance. We even used him on some young cows here. Dam, 144Y, is a good all-around med-sized cow with the udder we like - a typical dtr of 24W, she's producing really well! (avg WN indx 113 (M), 114(F)) Her '16 dtr topped 70 heifers in WN last yr. Surely, Creditor 77C will be doling out the dough! **Feature bull!**

80C is a curly yellow bull with red testicles who indexed well at weaning. He's deep & sound like his sire, 131Y. Tho 80C was not RFI tested, 131Y has good RFI, PWG & MARB EPDs. The dam 120S has done an outstanding job of producing (4 sons avg'd 108.8 WN index; 5 dtrs avg'd WN 113.2). Her sire, 21M, sires just what we're after: low BWs with lots of growth & gain, beautiful nice udders full of rich milk to add lbs to youngsters. Note: He's **Trait Leader** (for BW, Milk, TM, Stay, MPI) and has good MARB. Censor 80C is ready to examine your herd!

Looking for a **heifer bull**? Check out this 203Y son, born only 70 lbs BW! (EPDs back him up: CE +6.8 (top 2%) & BW -2.0 (top 1% of the breed)). He's all decked out in red - red neck, red testicles & red right down to the toes. The maternal pedigree further reduced the BW (70 lbs is below even Pete's avg BW!). The moderate, well-marked dam, 80A, is a MR MO LE 47F daughter. He was really a heifer bull in his time - throwing good, well-marked, sound progeny who grew & cows who stayed in the herd for years & years with good hair & good udders.

Looking to impress his sire 19A, 133C struts a wide top, thick & long build that very much resembles his papa! Cyrus has a great coat of hair, hooded eyes -one goggle eye and some pigment on the other - and red testicles. Add in some above avg #s to further amaze: 119.1 MPI, 147.2 FMI (top 15% of the breed) and 1.12 REA/100 lbs. 189Y was a 21M daughter that we purchased out of the Conway Dispersal sale. Conway's had purchased 21M from us, where the offspring did well for them, just like this 189Y mother of 133C.

Comrade will work together with you to build your herd! An excellent well-balanced bull, 135C is correct & sound, with excellent muscle, thickness, & strong performance - sired by a Justin Wichman bull, Rusty 372, which we purchased as a calf! Sire Rusty throws in a great pedigree plus milk! 135C's 145.7 FMI is top 15% of the breed, not to mention 42.2 PWG (top 6 % of the breed) with no extra feed (100 RFI EPD). Dam 110S, is sound as a kitten, and has an udder like a 1st-calver, tight with rich milk. This strong Rusty son demands a second look!

We're in the meat business, so ultrasound scanning should be important. It's nice to see scores like 136C's of 1.21 REA/100 lbs and above average Lean Meat Yield of 64.7. Phenotype is also important - a strong back for a long body with lots of muscle, yellow coat, hooded eyes with some red pigment and red testicles all have economic benefits. Throw in some tremendous maternal strength & udders from a complete & shining dam like 19Y, (sired by General 114L) and you've got a nice package for a beef-producing bull - 136C!

28Z has produced another outstanding specimen in this attractive, sound, very correct, deep son with a great haircoat & red testicles! Of course, the dam, 86R, has contributed too: Her 8 sons avg'd 105.6 WN index, 5 avg'd 105.6 YR index; 2 dtrs avg'd 114 WN index, 104 YR index. She nursed them all with an extremely nice level udder & plenty of rich milk. While getting older now, she's raised some tremendous bull calves over the years. Her maternal grandsire, 15H, produced volume & substance, udders & sound feet like 86R's, through to her son 137C.

106M is the pretty mama of 138C. She's an embryo transplant with length and extra rib along with correctness. Her record is proving her well by raising 12 bull calves to above average performance at WN (avg 102 WN index) and a daughter that indexed 112 at WN! She's pretty proud of this 138C son of hers too. He's correct, with a curly haircoat, extreme muscling, quarters round and loin wide (compliments of his sire, Pete 203Y) - a stout and a half!

Another great **heifer bull** from 28Z - 504C was 80 lbs at birth. Both parents pass red onto him - one goggle eye, red neck and red testicles, plus depth & thickness. The elite dam, 22T, comes from a pedigree of maternal strength (21M), easy-keeping, easy-finishing like her dam, 9R, yet feminine. 22T is nearly perfection. Her sons avg'd 90 lbs BW, dtrs 74 lbs. 5 sons avg'd 108.4 WN index; 2 dtrs avg'd 107.5 WN index. Her 67X son went to Bert Anderson, Sceptre, SK and 423B to Greg Barber, Leslie, SK, both purebred herds. Let 504C Chaperone your herd!

### January 2017

Claresholm Veterinary Services Ltd. has been providing veterinary service and consultation for over 20 years to the Ulrich Hereford Ranch. The majority of the service consists of breeding soundness evaluations of the bulls and herd health consultation.

Health problems are minimized with a good vaccination program and excellent management. Calves are vaccinated with the Zoetis SelectVac Gold Plus vaccine program (the comprehensive program to protect against respiratory disease

and BVD) in the spring and fall. The replacement heifers and bulls receive Bovi-Shield Gold FP5-VL5 in the spring before breeding. The cow herd receives Bovi-Shield Gold FP5-VL5 prior to calving. Cows and heifers also receive a scour prevention vaccine annually.

*Claresholm Veterinary Services Ltd. is proud to be associated with the Ulrich Hereford Ranch and their cattle operation.*

## ALL-STAR BREEDER

We at Ulrich Herefords are pleased to have been awarded the status of Five-Star Breeder, the highest possible, and 1 of only 42 operations across Canada to do so! This simply means that we have completely & accurately reported 5 traits: Calving Ease, Birthweights, Weaning Weights, Yearling Weights and Ultrasound on our entire calf crop.

## WHAT IS AN EPD?

**Expected Progeny Differences (EPDs)** are genetic predictions producers can use when making selection decisions. These values are available on performance animals from breed associations. ***It is important to understand you cannot compare EPDs between breeds, only within a breed.*** A buyer is always advised to use more than just the EPDs regardless of accuracy when making purchase decisions.

An Expected Progeny Difference (EPD) is a measure of the genetic merit of an animal using relevant performance and pedigree information. EPDs are expressed in the units of measure. For example, birth weight is expressed in pounds, and rib-eye area is expressed in square inches.

EPDs come from performance data. Producers submit data on their cattle. From this data, researchers look at the differences between animals raised in the same environment (contemporary groups) and ascertain the portion of that difference that is due to genetics (heritability). Also included in this is how the different traits relate to each other and interact together (correlations). They can then directly compare genetic differences among animals using the pedigree information contained in the CHA and AHA registries. The result is a value that can be directly compared between animals and across environments, an EPD.

### EPD'S USED IN THIS CATALOGUE

**Calving Ease EPD (CE)** - calculated using birth weight and calving ease score information. Calving ease EPDs represent the ease with which progeny of an animal are born to first calf heifers. The EPD is expressed as a percent probability, with a higher value representing calves with a higher probability of being born unassisted.

**Birth Weight EPD (BW)** - is an indicator of calving ease. Higher birth weight EPDs usually indicates more calving difficulty.

**Weaning Weight EPD (WW)** - reflects progeny growth differences up to 205-days.

**Yearling Weight EPD (YW)** - reflects progeny growth differences through to 365-days.

**Milk EPD (Milk)** - indicates the ability of a sire's daughters to provide their calves with an environment that encourages growth from birth to weaning, through mothering ability and milk production. This EPD is expressed in the expected difference in pounds of calf at weaning.

**Total Maternal EPD (TM)** - also known as Milk + Growth, this EPD combines the milk EPD plus 1/2 the Weaning Weight EPD. It is expressed in pounds of calf weaned at 205-Days and combines the genetics for pre-weaning growth and the influence of the maternal environment on the weaning weight of the daughter's progeny.

**Maternal Calving Ease EPD (MCE)** - represents the ease with which a sire's daughters will calve as first calf heifers, when compared to daughters of other sires. The EPD is expressed as a percent probability, with a higher value representing daughters with a higher probability of unassisted calving.

### COMPARABILITY OF EPD'S

EPDs from Hereford animals are directly comparable to other Herefords in North America and parts of South America, due to the inclusion of data from Canada, United States, Uruguay & Argentina. As well, it is important to remember that Hereford EPDs are NOT directly comparable to EPDs produced by different breeds, such as Angus or Simmental.
